DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 32-46 are rejected under 35 U.S.C. 103(a) as being unpatentable over the applicant admitted prior art (hereafter referred to as the AAPA) in view of Berndlmaier et al (6,455,336).

As per claims 32-34, the AAPA discloses a method comprising:

a plurality of flip-flops are connected into several chains, called scan chains, which are usually accessed through test pins, as shown in Figure 1, paragraph (0004). The AAPA does not disclose logically associating each pin of a first group to each pin of a second group. However, Berndlmaier et al logically divided pins of a chip into segments according to different functions or logical blocks. (See col. 2, lines 49-61). Therefore, it would have been obvious to a person of ordinary skill in the art, at the time the invention was made, to incorporate the logically divided pins of a chip into segments according to different functions or logical blocks as taught by Berndlmaier et al into the invention of the AAPA in order to logically associating pins of each group through a logical circuit so that the number of input pins is less than the number of scan chains.

As per claims 37-39 and 42-44, these claims are rejected under similar rationale as set forth in claims 32-34.

As per claims 35-36, 40-41 and 45-46, the AAPA and Berndlmaier et al do not specifically disclose that logically associating comprises: performing an exclusive OR operation. However, it would have been a matter of design choice to a person of ordinary skill in the art at the time the invention was made, to set the logically associating by performing an exclusive OR operation as desired if needed. This is because Berndlmaier et al already disclose logically divided the pins into different sections or logical blocks.

3. Claims 15-18, 24-31 are allowable.
4. Applicant's arguments with respect to claims 15-18 and 24-46 have been considered but are moot in view of the new ground(s) of rejection.
5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Phung My Chung whose telephone number is 571-272-3818. The examiner can normally be reached on Monday to Thursday.
